Benchmarking Bloodline Performance

Produced for the CRC for Premium Quality Wool undergraduate program by;
Allan Casey, NSW Agriculture.

Bloodline (Stud) Performance

- Bloodline variation
 - fibre diameter: +3.5 μ m to -3.5 μ m
 - fleece weight: +20% to -40%
 - **\$ GM/DSE:** +30% to -30%
 - accurate benchmarking vital to progress
- 25% of commercial breeders indicate they needed to change their ram source to achieve their flock's breeding objective

Strategies

'flock to flock' benchmarking

- 'looking over the fence'
 - comparative analysis groups
 - wether trials: public & on-farm
- **while flock comparisons,**
 - create awareness, and
 - in many cases a desire to make change
 - they do not provide a good solution

Strategies

'bloodline to bloodline' benchmarking

- **Bloodline Performance package**
 - a 'best practice' benchmark plus a system to achieve genetic improvement
 - a clear indication of the improvement possible
 - a sound strategy to achieve the improvement

'The Yanko' Bloodline Performance 1984 - 1995 Combined Wether Trials

Strategies

'flock to bloodline' benchmarking

- Bloodline Performance data set
 - wether trial team performance
- personalised outcome
- use when a bloodline is not listed
- genetic lag reduced
- genetic gain established

'Nowranie' Flock Performance

Benchmarked to Bloodline Performance

Strategies

'On-farm flock or bloodline' benchmarking

- After flock or bloodline benchmarking consider the need for local on-farm evaluation
- On-farm environment provides more detail but should not unduly delay change
- Time to change: 10 to 15 years base on rams
- Include ewe will reduce time significantly
 - advantage if change over cost is \$10/hd or less
